

the slide solution

another Arion brand

Introduction

The putting on and pulling off of therapeutic compression stockings and tights is often a difficult task which recurs on a daily basis. For this procedure to be performed more easily and with less effort Arion developed various application aid products. This product range is summarised under the name The Slide Solution.

The Slide Solution offers the total solution: all types of putting on and pulling off applications, both in single version as well as in a +package. Thus, offering a suitable product for each compression stocking wearer. The individual products are described in this brochure.

Indispensable for the putting on and pulling off of the compression stocking units with open and closed toe are The Slide Solution Gloves. For pulling on the arm stocking and prostheses Arion respectively developed Easy Arm and Easy Proth.

Problem definition

For both caregivers and patients the problem of putting on compression stockings and tights is a task which recurs on a daily basis. For caregivers putting on and removing compression stockings is a major source of physical strain. Even patients who are able to carry out the process independently find this process an increasingly arduous one. This often has a direct effect on therapy compliance.

Solution

Our Slide Solution products have been specifically designed to alleviate the problems experienced when putting on and pulling off compression stockings and tights with open or closed toe. The Slide Solution products are made from smooth material, which has been treated with a special coating. These properties create an ultra-smooth aid that reduces friction significantly. The friction reduction minimises the physical strain otherwise experienced by caregivers and patients. This, in turn, has a positive effect on the therapy compliance of patients. The clear and simple instructions for use allow patients to enjoy the freedom and convenience of independently putting on compression hosiery for a long time.

Target group

1. Patients who wear compression stocking and tights, but have great difficulties in putting on and pulling off and want to stay independent.
2. Caregivers who are faced with the prospect of putting on their patients' compression hosiery on a daily basis.

Product benefits

- Reduction of physical strain for both caregiver and patient
- Increase in patient's independence and therapy compliance
- Stockings retain therapeutic graduated compression longer
- Easy to use
- Saves time and money
- Durable
- Take it anywhere
- Also custom made available

Portfolio

Easy-Slide®

Application aid for open toe compression stockings and tights.

Magnide®

The ultimate application aid for closed toe compression stockings and tights.

Easy-Proth®

The application aid for putting on an above-knee prosthesis with suction socket.

The Slide Solution Gloves

Indispensable tool for putting on and pulling off of compression stockings in combination with The Slide Solution products.

Sim-Slide®

The ultimate application aid for putting on and pulling off open toe compression stockings and tights in one product.

Easy-Slide® Arm

Application aid for compression arm stockings.

Easy-Off®

Application aid for pulling off open or closed toe compression stockings and tights.

Quality and patents

The price of quality

At the development of our products quality and user experience are the main drivers. Of that the Magnide is a good example. It looks like a very simple product. The strength of the product is in the details. Arion's aim was to develop the world's simplest and best aid for putting on compression stockings with closed toe. All of this combined with the highest quality and strong worldwide patents.

Arion went in search of the best of materials; magnets, fabric, yarn, etcetera. The fabric is the basis of all our Slide Solution products, a very smooth cloth which has been treated with a special coating. Together with the double-layered application this quality creates an ultra-smooth aid with significantly reduced friction. The magnets need to have the perfect magnetic strength; not too strong and not too weak, as the Magnide needs to stay closed whilst putting on the stocking, but should be easy to open when removing it from the stocking. Moreover, thickness and size was particularly important. After extensive testing of magnets at Arion, together with TUV, the perfect magnet was found. In order to keep the magnets firmly in place, they have been put into "pockets". To prevent the magnets from slipping the material of the pockets has a slightly rough feel.

Finally all components were thoroughly tested and researched to maximise quality.

The value of patents

A patent is an exclusive right intended to protect a new product, method or technology. Arion has in recent years received 7 international patents for its Slide Solution products. Because of this protection, we are able to continue to develop innovative products. This keeps innovation the main driver of Arion!

Review Magnide

Personally, I find the magnet closing system a clear progress compared to the Easy Slide Caran. The reasons for this are that the Magnide opens easier and the small chance of damaging the stocking is no longer present. Less force is needed and the folding is less complicated. I have had the product tested by various customers during several weeks. Especially the improved user-friendliness was seen as very positive. To summarise I would definitely recommend the Magnide, because the putting on of your compression stockings becomes easier yet again.

Onno Smeets, Advisor compression stockings, Spronken Orthopedie

Arion, an innovative solutions minded company, is focused on producing simple and affordable solutions for care aids within international medical markets. The company cleverly meets the increasing demands for low cost, highly efficient products in the care sector and develops, produces and markets these innovative, medical solutions. These products include durable aids for putting on and pulling off therapeutic compression stockings and products with which you can wash bedridden patients without water, all of which are created to enhance ease of use and efficiency in healthcare.
